

Interactive Calendar - Documentation

1. Project Overview

This project is a simple interactive calendar built using HTML, CSS, and JavaScript. Users can navigate through months, view weekdays, and see the current date highlighted.

2. Features

- Displays current month and year
- Allows navigation to previous and next months
- Highlights the current date
- Differentiates weekends from weekdays
- Responsive design for mobile and desktop users

3. Technologies Used

- HTML: Structure of the calendar
- CSS: Styling and responsiveness
- JavaScript: Logic for date calculation and interactivity

4. Installation & Usage

1. Download the project files (HTML, CSS, and JavaScript).
2. Open `index.html` in a web browser.
3. Click the 'Previous' and 'Next' buttons to navigate months.
4. View the current date highlighted.

5. Code Explanation

- `index.html`: Provides the structure of the calendar.
- `styles.css`: Contains styles to make the calendar visually appealing.
- `script.js`: Handles date calculations and user interactions.

6. Future Enhancements

- Add event marking functionality
- Allow users to select a specific date range
- Implement a dark mode feature
